

Park Avenue Gaming

Overview

Park Avenue Gaming is looking for a talented self-driven NodeJS Backend Developer to join our skilled team of experts. We specialize in scratch card management systems; inventory tracking and Point-of-Sale mobile applications; customer facing lottery prize tracking applications; mobile device retail locator applications; social mobile casino platforms and games; Class-II digital scratch games; and many other aspects of the global lottery and gaming business. We serve a variety of gaming interests around the world and care deeply about the systems we provide and the impact it has on our customers' business.

Description

As a NodeJS Backend Developer with the Park Avenue Gaming team your primary mission will be developing the foundation of our next generation mobile device applications and game platforms for lottery and gaming operations around the world. You will be involved in all aspects of the design and development of a variety of backend REST-like API servers and the datastores that support them including database design and development, cache system management, 3rd party API integration, and building and supporting a wide range of social, gaming, and lottery API providers. These API servers support our own mobile and web application offerings to our customers as well as providing integration points into our services for 3rd party vendors. You will be working primarily in Javascript utilizing the NodeJS platform and npm package manager. You will also be directly involved with designing both the data tables to support the API and the queries that manage that data. We work primarily with MySQL, the Sequelize ORM Memcached and Redis for database and cache support. Experience with mobile application development (Android or iOS) or web application development, especially with the Angular framework, are a plus. You will be working in concert with the rest of the Park Avenue Engineering team to rapidly respond to customer needs on existing offerings as well as to quickly engineer and bring to production new gaming applications and gaming/lottery management systems.

This position offers working remotely with semi-regular meetings in the corporate office for design sessions or project pushes. Hours are flexible with a focus on task completion rather than time on the clock. Park Avenue Gaming offers a competitive benefits package including healthcare benefits, PTO, and competitive salaries.

Primary Technical Skills

- 5+ years software development experience
- 3+ years experience with Javascript/ECMAScript development
- 3+ years experience using NodeJS framework for backend server development
- High level knowledge and experience with npm package manager
- 3+ years experience with REST / JSON API development and connectivity
- 3+ years experience in database design / development, MySQL experience preferred
- 3+ years experience with cache strategies and tools such as Memcached, Redis, or similar
- 3+ years experience with SQL
- 2+ years experience with Sequelize ORM or similar ORM tools
